

Synopsis of
Project report

A project report to be submitted by

Lenny Ryan Munene Njuguna
ID. No. GH1059213

Course
in
Computer Science

Under the supervision of
Prof. Name
William Baker Morrison

1 Introduction

This report provides an overview of my personal portfolio website, developed to showcase my academic achievements and technical skills. The portfolio serves as a digital platform that enables employers and recruiters to learn more about me and access supporting documents.

2 Motivation

I was motivated to make this portfolio website to support job and internship applications and create networking opportunities. It will also serve as a repository for all my achievements and projects. This is bound to improve my professional visibility and demonstrate my technical capabilities.

3 Features

The portfolio has the following key features:

- About Section
Relays a short Bio that pinpoints my interests and gives a small brief introduction of me and my career goals.
- Education Section
Displays my educational background and achievements in all levels of education.
- Project Section
Showcases my completed projects and gives a small description of the projects, my input, and the technologies used in the project
- Skills Section
Shows my technical expertise across different fields and programming languages. Also displays my software proficiencies.
- Contact Section
Provides channels I can be reached through for inquiries and networking opportunities.

4 Brand

My personal portfolio brand resembles the science fiction genre, well known as cyberpunk. I chose it as my brand identity since it closely relates to advanced technologies in futuristic worlds and cities filled with artificial intelligence and a diverse cyberspace. It communicates a personality that is technology-oriented, innovative and professional. Its visuals offer a modern, user-focused and professional responsive interface.

5 Technologies Used

1. HTML5

Used to structure the content of my portfolio website and its layout

2. CSS

Used to style the website and its visual representation

3. GitHub

Used for deploying and hosting the code for the website

4. README.md

Used for content organization and documentation

6 Strengths

1. Professional Presentation

Includes key sections such as:

(a) About me section

(b) Skills

(c) Projects

(d) Contact information

2. Strong Personal Branding

Helps demonstrate creativity alongside technical skills, which help me stand out.

3. Technical/Project Showcase

The website displays practical experience development skills, which gives employers confidence in my skills when hiring me into the organization

4. Information Accessibility

Employers are able to quickly access my contact details, skills and projects

5. Responsive design

Provides a positive user experience across all platforms

7 Weaknesses

1. Complex Design Structure

Some employers and recruiters prefer a minimalist portfolio design

2. Limited Real-World Experience

No prior work experience and a lack of professional projects can make employers lack confidence in my skills.

3. Lack of Testimonials

No recommendations by a professor or lecturer lowers credibility.

4. Performance Issues

The webpage may be slow due to the high animations of the cyberpunk theme designs.

8 Future Improvements

I strive to take further steps forward in my career journey and have better credentials that would increase my professional scope and viability for better opportunities. This include:

1. Increase my programming skills and learn new programming languages

2. Take part in more professional projects

3. Increasing more certifications

4. Improve my UI/UX skills

5. Improve my code quality and structure
